

Help create a Zero Carbon Greater Cambridge

The consultation on the Greater Cambridge Local Plan has started.

Help defend ZERO CARBON NEW HOMES

The draft Local Plan includes a Net Zero Carbon policy for all new homes:

- Homes so energy efficient, they will be nearly free to heat.
- Each home generating as much renewable electricity as it uses.

Responsible developers have shown that this can be done cheaply, but powerful forces are trying to kill it off. Help us defend this policy.

Say No to TOO MANY NEW HOMES

The Local Plan is aiming for 44,000 new homes. We need more affordable homes for people that live, work & study here, but this is too many!

- We should not be concreting over the countryside, depleting our precious chalk streams & increasing carbon emissions for the benefit of foreign property speculators & local land owners.
- Greater Cambridge is already economically overheated and environmentally overstressed.
- 44,000 is 20% more than central Government's required minimum.

Join us in responding, & help build a low carbon future

Respond by 13 Dec 2021

Responding to the consultation is important because the Greater Cambridge Local Plan will guide & control development in Cambridge & South Cambridgeshire until 2041.
